

***Amendments to the Claims***

This listing of claims will replace all prior versions, and listings of claims in the application.

1. (previously presented) A system for managing administration of computer services provided to users comprising:

a computer system comprising at least one processor;  
an operating system running on the computer system;  
a plurality of Virtual Private Servers (VPSs) running on the computer system,  
a plurality of server processes running on the computer system, each of the server processes running within respective VPS, the server processes provide services to a plurality of remote users; and a plurality of dedicated Virtual Private Servers (VPSs) with a set of services that perform administrative operations,

each of the dedicated VPSs provide administrative services to each of the server processes running in other VPSs,

each of the plurality of VPSs and each of the dedicated VPSs are isolated from each other by a logical isolation of processes, the administrative operations include servicing of operations that require multiplexing of the server processes;

the multiplexing is performed using separation of requests based on a content of a request directed to the server process or separation of requests based on a different network protocol address.

2. (original) The system of claim 1, wherein the server process is any of a file server, an authentication server, a chroot environment server, a jail environment, a print server, a POP3 server, an IMAP/IMAP4 server, an SMTP server, a scheduler

server, a COM/COM+/DCOM server, a cryptographies server, a browser server, a DHCP server, a distributed file system server, a Distributed Link tracking server, an event log server, a reporting server, a file replicator server, an indexing server, a firewall server, a Kerberos server, an IPSEC server, a logon server, a Network DDE server, an NLA server, a performance logs and alerts server, a plug and play server, a print spooler server, a protected storage server, a disk encryption server, a routing server, a remote access server, a system event notification server, a telnet server, an uninterruptible power supply server, a Windows Management Instrumentation (WMI) server, a wireless configuration server, a WMI performance adaptor server, a data base server, a network address translation server, an IRC server, an inetd server, a volume shadow copy server, a boot and remote boot server, a finger server, a who server, a rexec server, a webster server, a conference server, a zip server, an abackup server, an ASP server, and a fido server.

3. (original) The system of claim 1, wherein the server process is any of an FTP server, a sand box environment server, a chat server, an X windows server, a secure shell (SSH) server, and a socks server.

4. (original) The system of claim 1, wherein the server process is a webserver.

5. (original) The system of claim 1, wherein the server process is any of a file server, a VPS, a Windows Terminal Service, a domain name server, an SSL server, an instant messaging server, a message write server, a security account manager server, a

telephony server, a virtual disk server, a Windows installer server, a radius server, and a backup server.

6. (original) The system of claim 1, wherein the server process includes any of a WAP server, Plesk server<sup>TM</sup>, a Virtuozzo<sup>TM</sup> server, a Virtuozzo for Windows<sup>TM</sup> server, a wireless access server, a wireless router and a wireless access point.

7. (currently amended) The system of claim 1, wherein the administrative operations include any of:

- collection of statistics relating to the server process;
- servicing of requests for management of the server process;
- servicing of requests for management of operating system functions;
- servicing of requests for computer system resource allocation;
- servicing of requests for computer system resource re-allocation;
- servicing of requests for authorization within the operating system;
- servicing of requests for authorization within the server process;
- servicing of requests that the server process is forbidden from executing;
- servicing of requests that the server process cannot execute;
- servicing of operations that potentially can cause a fault in the server process;
- ~~servicing of operations that require multiplexing of server processes;~~
- data backup and restore operations, update and patch installation;
- checking permissions for operations;
- security-related analysis and operations;
- audit of operations;

application installation and configuration;  
network and other OS and application parameter configuration;  
driver installation and upgrade;  
spam filter operation;  
firewall installation and configuration;  
creation and deletion of users;  
creation and deletion of groups;  
license-related management; and  
remote access management.

8. (currently amended) The system of claim [[7]] 1, wherein the multiplexing is performed using separation of requests based on a different network protocol address.

9. (currently amended) The system of claim [[7]] 1, wherein the multiplexing is performed using separation of requests based on a content of a request directed to the server process.

10. (previously presented) The system of claim 1, wherein the administrative services include any of:

servicing of requests for authorization within the operating system;  
servicing of requests for authorization within the server process;  
creation and deletion of users;  
creation and deletion of groups;  
license-related management;

remote access management; and  
security-related analysis and operations.

11. (previously presented) The system of claim 1, wherein the administrative services include any of:

servicing of requests that the server process is forbidden from executing;  
servicing of requests that the server process cannot execute; and  
servicing of operations that potentially can cause a fault in the server process.

12. (previously presented) The system of claim 1, wherein the administrative services include application installation and configuration.

13. (previously presented) The system of claim 1, wherein the administrative services include data backup and restore operations.

14. (previously presented) The system of claim 1, wherein VPS isolation comprises any of , physical isolation of processes, namespace isolation, data isolation, address isolation, fault isolation and performance isolation.

15. (original) The system of claim 1, wherein VPS isolation includes resource isolation.

16. (previously presented) The system of claim 1, wherein the administrative services include any of servicing of VPS migration requests;

servicing of processes migration requests; and

servicing of requests for computer system resources.

17. (previously presented) A system for managing administration of computer services provided to users comprising:

a computer system comprising at least one processor; an operating system running on the computer system;

a plurality of Virtual Private Servers (VPSs) running on the computer system;

a plurality of server processes running on the computer system that provide services to a plurality of remote users, each of the server processes running within respective VPS; and

a plurality of dedicated Virtual Private Servers (VPSs), each of the dedicated VPSs provides administrative services to each of the server processes running in other VPSs,

each of the plurality of VPSs and each of the dedicated VPSs are isolated from each other by a physical isolation of processes, the administrative operations include servicing of operations that require multiplexing of the server processes;

the multiplexing is performed using separation of requests based on a content of a request directed to the server process or separation of requests based on a different network protocol address.

18. (original) The system of claim 17, wherein the server processes include any of a file server, an authentication server, a chroot environment server, a jail environment, a print server, a POP3 server, an IMAP/IMAP4 server, a SMTP server, a scheduler server, a COM/COM+/DCOM server, a cryptographics server, a browser

server, a DHCP server, a distributed file system server, a Distributed Link tracking server, an event log server, a reporting server, a file replicator server, an indexing server, a firewall server, a Kerberos server, an IPSEC server, a logon server, a Network DDE server, an NLA server, a logs and alerts server, a plug and play server, a print spooler server, a protected storage server, a disk encryption server, a routing server, a remote access server, a system event notification server, a telnet server, an uninterruptible power supply server, a Windows Management Instrumentation (WMI) wireless configuration server, a WMI performance adaptor server, a data base server, a network address translation server, an IRC server, an inetd server, a volume shadow copy server, a boot and remote boot server, a finger server, a who server, a rexec server, a webster server, a conference server, a zip server, an afbackup server, an ASP server, a fido server, WAP servers, Plesk server<sup>TM</sup>, Virtuozzo<sup>TM</sup> servers, Virtuozzo for Windows<sup>TM</sup> servers, wireless access servers, wireless routers and wireless access points.

19. (original) The system of claim 17, wherein the server process is any of an FTP server, a sand box environment server, a chat server, an X windows server, a secure shell (SSH) server, and a socks server.

20. (original) The system of claim 17, wherein the server process is a webserver.

21. (original) The system of claim 17, wherein the server process is any of a file server, a VPS, a Windows Terminal Service, a domain name server, an SSL server, an instant messaging server, a message write server, a security account manager server, a

telephony server, a virtual disk server, a Windows installer server, a radius server, and a backup server.

22. (currently amended) The system of claim 17, wherein the administrative services include any of:

- collection of statistics relating to the server process;
- servicing of requests for management of the server process;
- servicing of requests for management of operating system functions;
- servicing of requests for computer system resource allocation;
- servicing of requests for computer system resource re-allocation;
- ~~servicing of operations that require multiplexing of server processes;~~
- data backup and restore operations, update installation;
- security-related analysis and operations;
- audit of operations;
- network and other OS and application parameter configuration;
- driver installation and upgrade;
- spam filter operation; and
- firewall installation and configuration.

23. (currently amended) The system of claim ~~[[22]]~~ 17, wherein the multiplexing is based on a network protocol addressing.

24. (currently amended) The system of claim ~~[[22]]~~ 17, wherein the multiplexing is based on a content of a request directed to the server process.

25. (previously presented) The system of claim 17, wherein the administrative services include any of:

- servicing of requests for authorization within the operating system;
- servicing of requests for authorization within the server process;
- checking permissions for operations;
- creation and deletion of users;
- creation and deletion of groups;
- license-related management;
- remote access management; and
- security-related analysis and operations.

26. (previously presented) The system of claim 17, wherein the administrative services include any of:

- servicing of requests that the server process is forbidden from executing; and
- servicing of operations that potentially can cause a fault in the server process.

27. (previously presented) The system of claim 17, wherein the administrative services include application installation and configuration.

28. (previously presented) The system of claim 17, wherein the administrative services include data backup and restore operations.

29. (previously presented) The system of claim 17, wherein VPS isolation further comprises any of logical isolation of processes, namespace isolation, data isolation, address isolation, fault isolation and performance isolation.

30. (original) The system of claim 17, wherein VPS isolation includes resource isolation.

31. (currently amended) The system of claim 17, wherein the administrative services include any of:

- servicing of VPS migration requests;
- servicing of processes migration requests; and
- servicing of requests for computer system resources.

32. (previously presented) A system for managing computer services provided to users comprising:

- a computer system comprising at least one processor; an operating system running on the computer system;

- a plurality of Virtual Private Servers (VPSs) running on the computer system;

- a plurality of server processes running on the computer system, each of the server processes running within respective VPS, the server processes provide services to a plurality of remote users; and

- a plurality of dedicated Virtual Private Servers (VPSs) that instantiates and terminates the server processes running in other VPSs in response to user requests for the service,

- each of the plurality of VPSs and each of the dedicated VPSs are isolated from each other by a namespace isolation of processes, the administrative operations include servicing of operations that require multiplexing of the server processes;

the multiplexing is performed using separation of requests based on a content of a request directed to the server process or separation of requests based on a different network protocol address.

33. (original) The system of claim 32, wherein the server processes include any of a webserver, a file server, an FTP server, an authentication server, a VPS, a chroot environment server, a jail environment, a sand box environment server, a print server and a Windows Terminal Service, a POP3 server, an IMAP/IMAP4 server, a SMTP server, a scheduler server, a COM/COM+/DCOM server, a cryptographics server, a browser server, a DHCP server, a Distributed file system server, a Distributed Link tracking server, an event log server, a reporting server, a DNS server, a file replicator server, an SSL server, an indexing server, a firewall server, a Kerberos server, an IPSEC server, an instant messaging server, a message write server, a logon server, a Network DDE server, an NLA server, a performance logs and alerts server, a plug and play server, a print spooler server, a protected storage server, a disk encryption server, a routing server, a remote access server, a security account manager server, a system event notification server, a telnet server, a telephony server, an uninterruptible power supply server, a virtual disk server, a Windows installer server, a Windows management instrumentation wireless configuration server, a WMI performance adaptor server, a data base server, a Network address translation server, an IRC server, a chat server, an X windows server, an inetd server, a volume shadow copy server, a boot and remote boot server, a finger server, a secure shell (SSH) server, a who server, a rexec server, a webster server, a conference server, a radius server, a zip server, a socks server, an afbackup server, a backup server, an ASP server, a fido server, a WAP server, Plesk server<sup>TM</sup>, a

Virtuozzo™ server, a Virtuozzo for Windows™ server, a wireless access server, a wireless router and a wireless access point.

34. (previously presented) The system of claim 32, wherein the instantiation is based on a network protocol addressing the user requests.

35. (original) The system of claim 32, wherein the instantiation is based on a content of the user requests.

36. (canceled)

37 - 46. (canceled)
